

Verifone M400

Simple, sleek, and very sophisticated.

Investment Protection

Write an app once and port it across multiple devices with our single-kernel architecture. Apps written for the MX 9 series can be easily ported to the M400, saving time and development costs.

The M400 is also backward-compatible with an MX cabling solution, so you can leverage your existing installation to simplify upgrades.

The M400 delivers class-leading performance, flexibility and security—backed by the trusted Verifone brand.

A Diamond in the Multilane

The M400 is the total package and takes the checkout experience to a new level.

- ✓ Powerful processor and ample memory to support multimedia and commerce applications
- ✓ Multi-touch gesturing and scrolling capabilities
- ✓ Flexible connectivity options, including optional WiFi and Bluetooth 4.2 with BLE and beaconing capabilities
- ✓ Smart cabling/modular connectivity
- ✓ Accepts all the latest payment methods

Specifications

Processor

1 GHz Arm Cortex-A9 32-bit RISC

Memory

1 GB (512 MB Flash, 512 MB RAM), microSD

Operating System

V/OS (Linux-based)

Display

5" FWVGA (854 × 480), capacitive multi-touch screen, Corning® Gorilla® Glass technology

Security

PCI PTS 5.X-approved

Connectivity

Ethernet; optional 5 GHz + 2.4 GHz WiFi; optional Bluetooth 4.2 BLE; single cable out with modular design: USB, serial RS-232, IBM tailgate; compatible with MX cabling; front-facing, easily accessible audio jack

Physical

175 mm L × 155 mm W × 43 mm H

Other

Optional field-replaceable passive stylus, backlit keypad, PSCR & MSR LEDs, 2 SAM slots, Kensington lock

Verifone M400

STEP INTO THE EXPRESS LANE

The M400 is a sleek, simplified, tour de force of a payment device that gives you the power to elevate the in-store shopping experience with advanced commerce and personalization capabilities that rival the online shopping experience. This device brings a whole new dimension to the checkout, with more features, functionality, and tools to help you better compete and innovate faster.

Better, sleeker, simpler

Sleek as a sports car. Strong as an SUV.

Every detail of the M400 is eloquently designed with the consumer in mind—from its sleek appearance to the elevated EMV slot for smoother card insertion. The angle of the display is made for natural upright viewing and glare reduction, and the capacitive touch screen with Gorilla® Glass technology provides durability and better scratch resistance.

Each device is equipped with the most durable materials available and goes through an extensive QA process to ensure optimal performance, even in the most demanding environments.

Don't dream it—build it

A serious upgrade.

Sexy, yet sophisticated, the M400 provides an interactive consumer experience that goes beyond payments. From its stunning 5" FWVGA display, multi-touch gesturing capabilities and scrolling and split-screen features, the M400 is a crowd pleaser. Equipped with more memory and a powerful processor, the device can support rich multimedia and full-motion video and enable delivery of highly targeted and personalized content to consumer mobile devices with optional BLE/beaconing capabilities.

With the power of Verifone Connect, retailers can customize the point of sale with innovative apps that foster rich content and interactivity to build loyalty, create new revenue streams, and drive brand preference.

Retail-ready

Innovation is easier than ever.

With an open, Linux-based architecture, developers are empowered with a modern framework, operating system and tools that simplify development and lower deployment costs. We're removing the complexities around payment so you can innovate easier and speed time to market.

Verifone's Developer Central allows developers to easily build custom apps and deploy them via the Merchant Marketplace. Retailers can then easily browse and download apps.

Since commerce apps communicate with third-party servers through our PCI DSS-compliant Secure Commerce Gateway, there's no need to recertify devices.
